Environmental pollution is a major issue the world is facing at present. The population growth, industrialization and technological development have led to the degradation of water, air, and land. The natural resources are depleting quantitatively and qualitatively day by day. If this situation is not prevented, it may lead to a scarcity of natural resources. Research is ongoing on how to preserve our precious resources. There should be effective means by which the outcome of research is disseminated so that it can be implemented for the benefit of all concerned. With this aim, Karunya University is planning to conduct a National Conference on **ENVIRONMENTAL POLLUTION** on 31 March 2010. This conference is aimed at reducing the gap between research and action to be taken by the Government and the NGO's by providing a platform for researchers and all the stakeholders.

Themes of the Conference

Part I :

- Water quality
- Purification of drinking water supplies
- Waste water treatment and disposal
- GIS for water quality
- Water quality modeling

Part II :

- Air contaminants – sources and effects

- Preventive measures for air pollution
- Climate change – effects and solutions
- Air pollution monitoring and modeling
- Indoor air quality
